

Stacy Scobee, Mike Castejon, and Becky May enjoy working as a group on a physics project.

Mr. Moser cheeses for a picture.

Earth Science is one of Mike Lanham and Hope Richardson's favorite subjects.

Studying hard, Becky Collins?

# Science

By Crystal Mudgett

"Does the unknown chemical go into the blue or clear liquid?" Many science students experience this dilemma along with dissecting animals and studying the unknown depths of the earth. North Putnam's young scientists followed in their predecessor's footsteps as they conducted experiments, wrote lab reports, and took some killer exams. Physics students took a field trip to Six Flags in St. Louis to study the laws of physics by riding a roller coaster. "It was fun to be out of school for a day and yet, still have a learning experience," commented senior physics student Linda Campbell. The Science Department had a new arrival this year, Ms. Stephenson. She was Valedictorian of her senior class at Danville and a graduate of Purdue University. Ms. Stephenson previously taught at Chrisman High School in Illinois. Ms. Stephenson took over Ms. Mounts position classes. The North Putnam Science Department includes Ms. Stephenson, Mr. Moser, Mr. Roy, Mr. Copner, and Mrs. Patrick.

Freshman Biology studies hard for an upcoming test.

Kelly Catania tries to act as if she is paying attention in Chemistry Class.
